Assignment -2

- **Dount Chart**

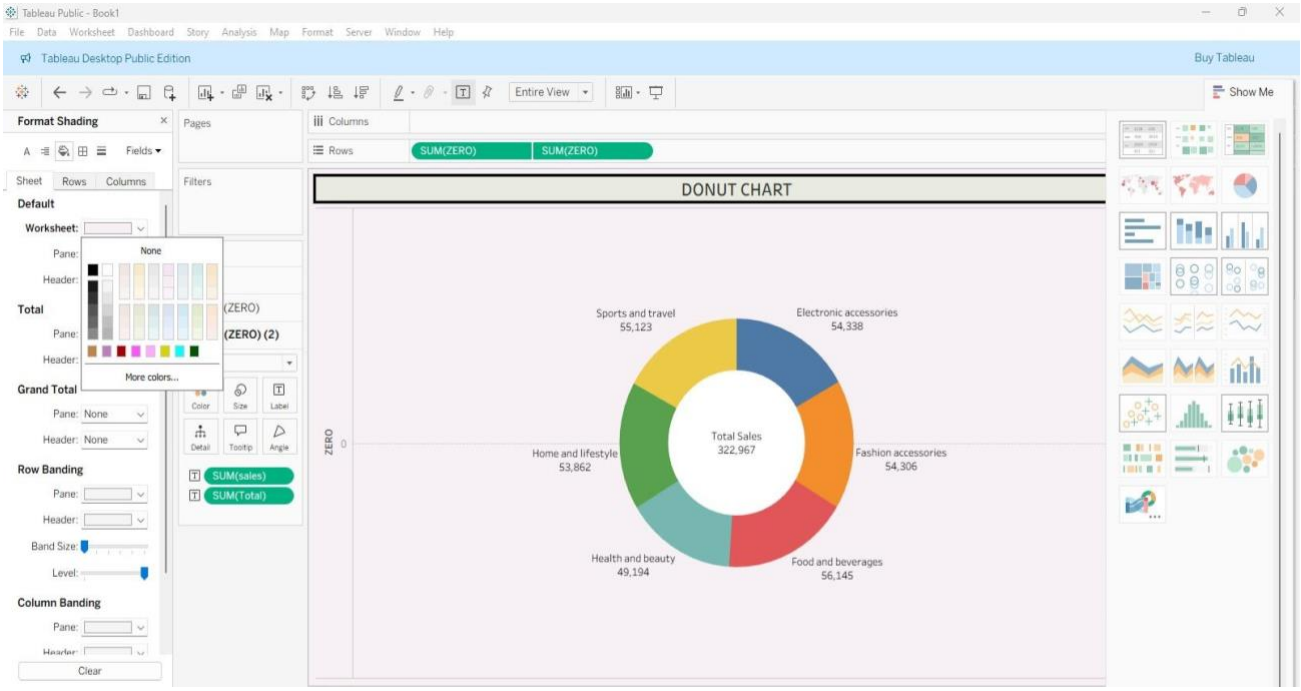
  A donut chart is a circular chart similar to a pie chart, but with a hole in the center, where each segment represents a proportion of the whole.

  Purpose:

  The purpose of a donut chart is to show the percentage or proportion of categories in a visually clear and compact way.

  Steps:

  - Open Tableau & Connect Data
  - Open Tableau Public/Desktop and load your dataset.
  - Open New Worksheet →Click on a new Sheet.
  - Create Pie Chart→Go to Show Me → Pie Chart.
  - Drag Category Field :Drag Category → to Color,Drag Category → to Label
  - Drag Measure:Drag Quantity (or Sales field) → to Angle,Drag it again → to Label
  - Convert Pie to Donut
  - Drag the same measure to Rows twice
  - Right-click second axis → Dual Axis
  - Change second Marks to Circle
  - Reduce Size and color it white (to create donut hole)
  - Edit title: Doubt chart



- **Area Chart**

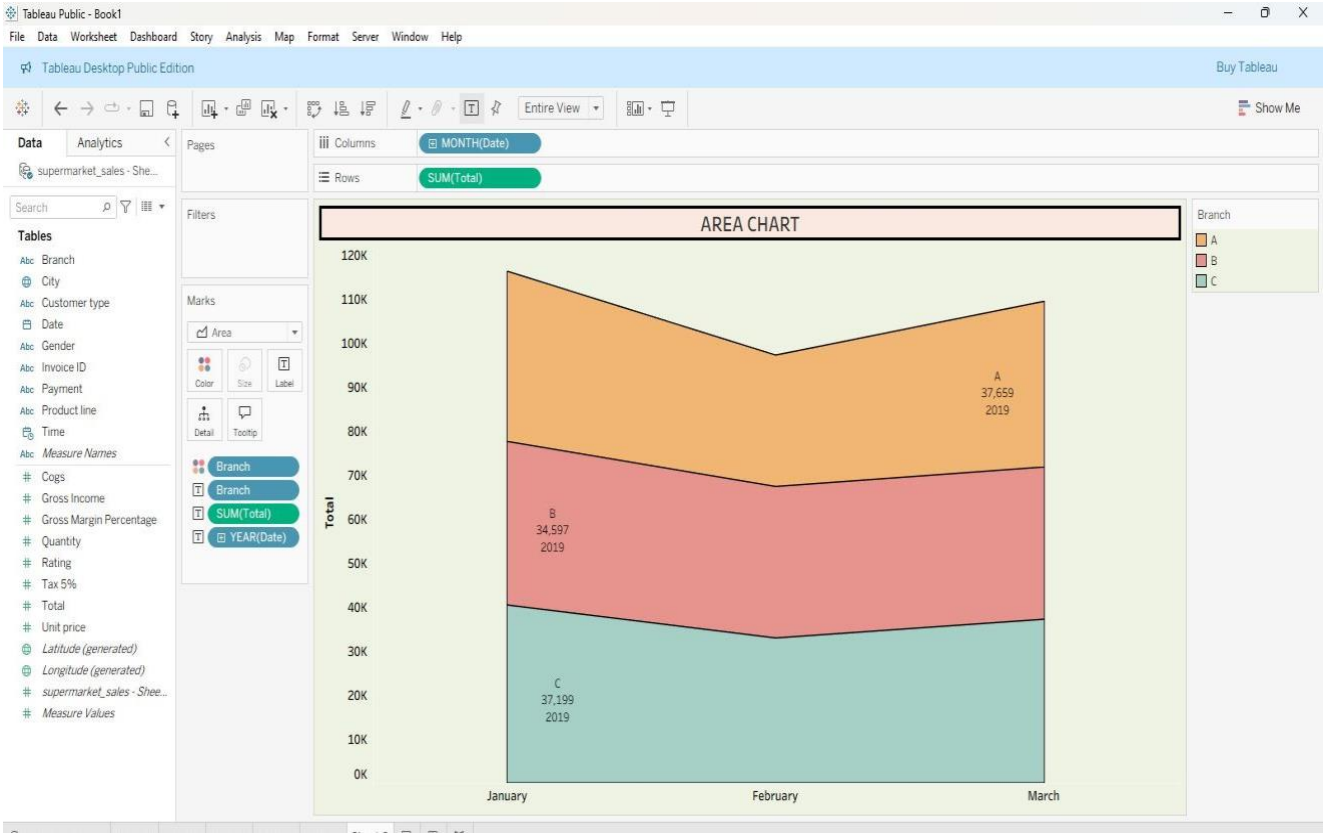
  An area chart is a type of line chart where the area below the line is filled with color to represent the magnitude of values over time.

  Purpose:

  The purpose of an area chart is to show trends over time while emphasizing the total value or magnitude of change.

  Steps:

  - Open Tableau Public/Desktop and load your dataset.
  - Open New Worksheet
  - Click on a new Sheet.
  - Drag Date Fields: Date → to Columns
  - Change it to MONTH(Date) if needed.
  - Drag Total → to Rows
  - Make sure it shows SUM(Total).
  - Change Chart Type to Area & Add Branch
  - In Marks card, change to Area
  - Drag Branch → to Color (to create stacked area)
  - Edit Title: Area chart



- **Text table**

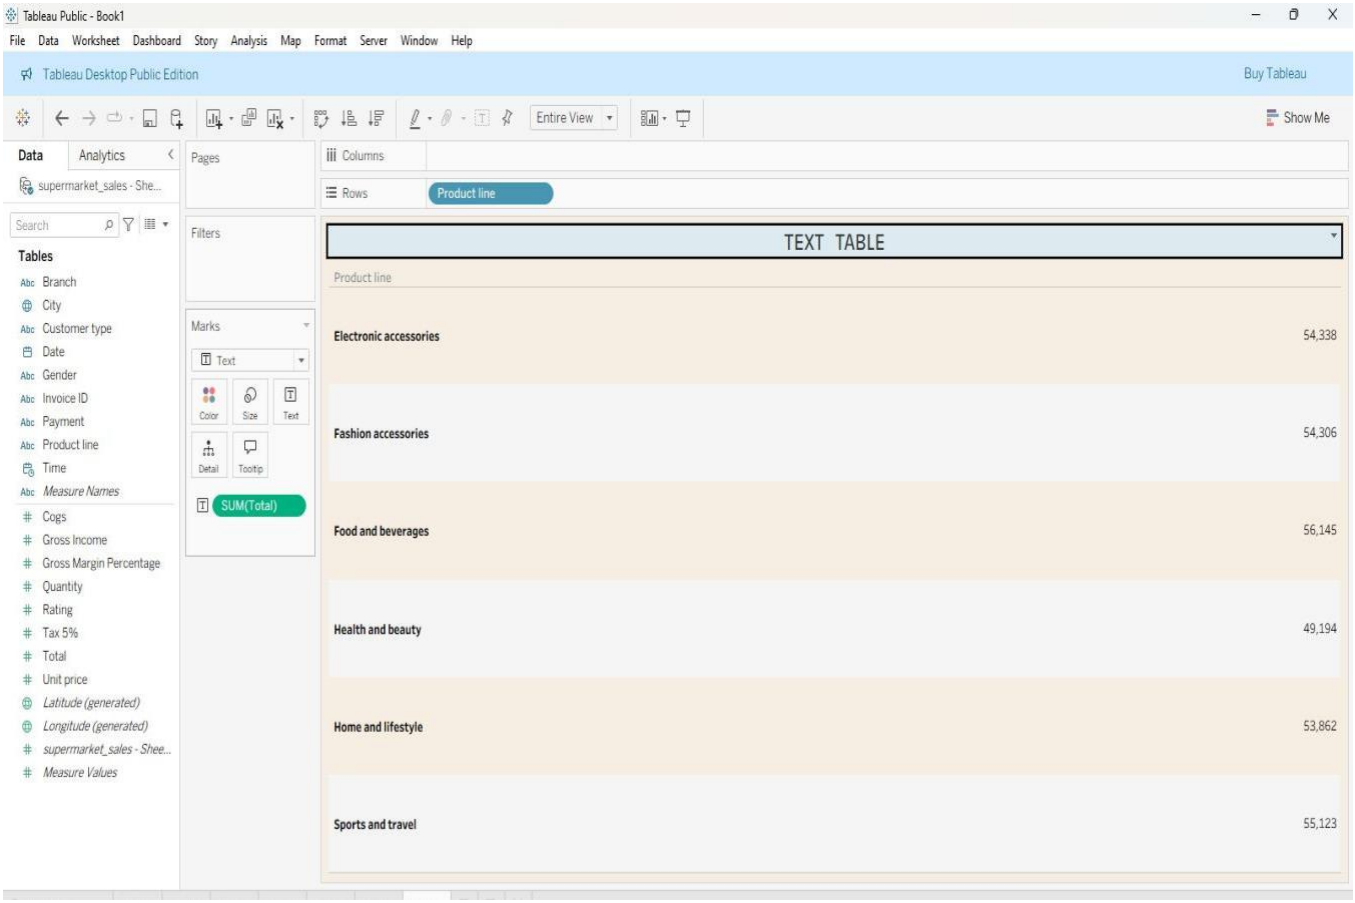
  A text table is a simple data display format that shows values in rows and columns using text instead of graphical elements.

  Purpose:

  The purpose of a text table is to present exact numerical values clearly and allow detailed comparison between data points.

  Steps:

  - Open Tableau Public/Desktop and load your dataset.
  - Open New Worksheet→Click on a new Sheet.
  - Drag Branch Field: Drag Branch → to Rows.
  - Drag Total → to Text (Marks card).
  - Make sure it shows SUM(Total).
  - Set Chart Type to Text Table
  - In Marks, select Text
  - Edit Title: Text table



- **Highlighted table**

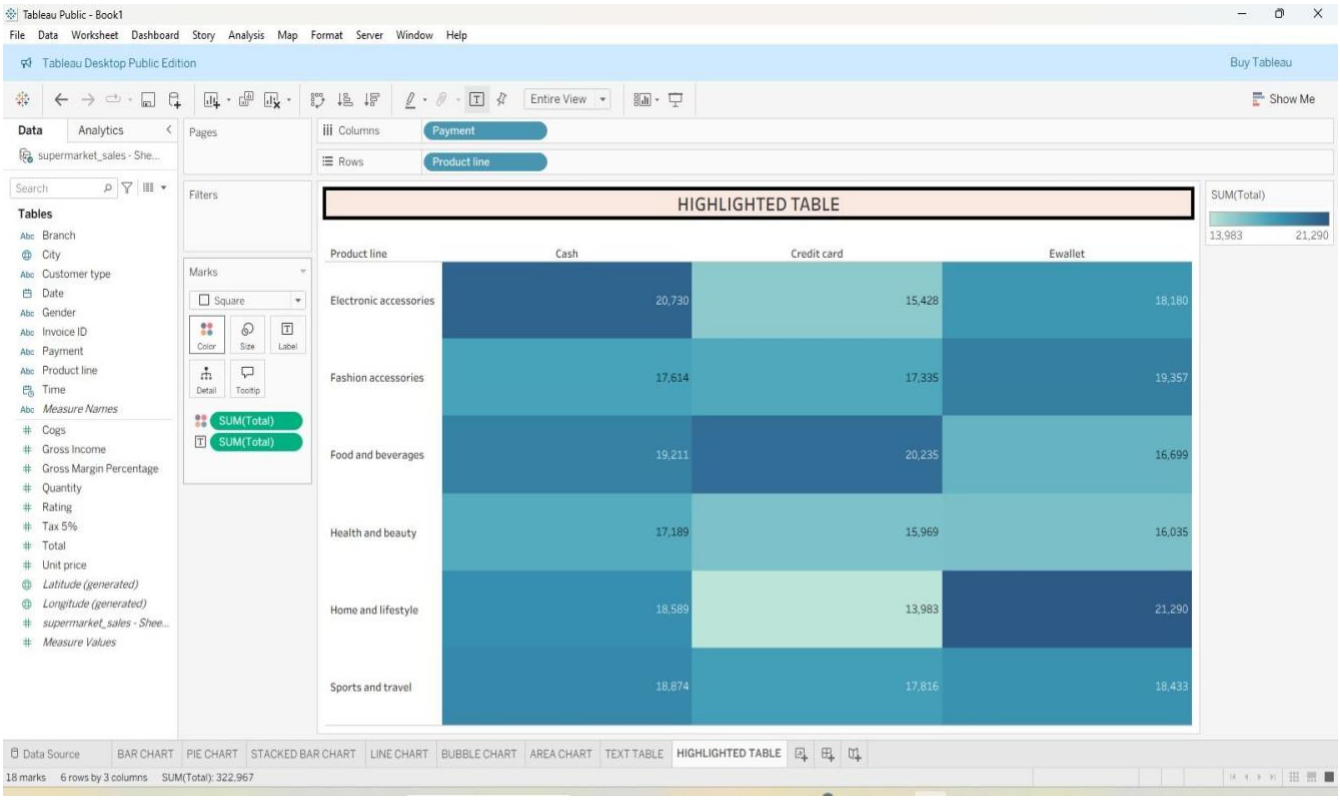
  A highlighted table is a text table where cell values are shown with colors based on their magnitude or intensity.

  Purpose:

  The purpose of a highlighted table is to display exact values while using color to quickly identify patterns, high and low values, and trends.

  Steps:

  - Open Tableau Public/Desktop and load your dataset.
  - Open New Worksheet→Click on a new Sheet.
  - Drag Product line → to Rows,Drag Payment → to Columns.
  - Drag Total → to Text.
  - Drag Total again → to Color
  - Then go to Show Me → Highlight Table.
  - Edit Title: Highlighted table



- **World cloud**

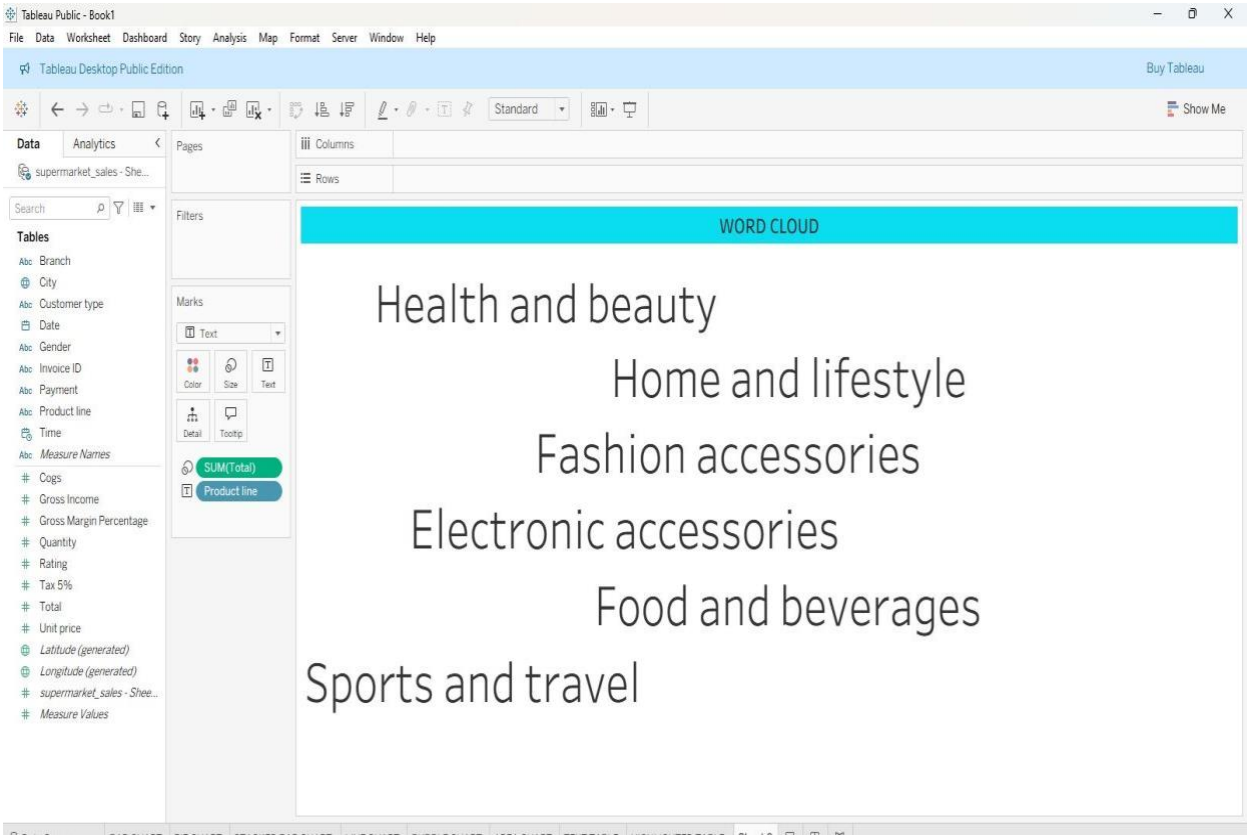
  A word cloud is a visual representation of text data where words are displayed in different sizes based on their frequency or importance.

  Purpose:

  The purpose of a word cloud is to quickly highlight the most common or significant words in a dataset.

  Steps:

  - Open Tableau Public/Desktop and load your dataset.
  - Open New Worksheet→ Click on a new Sheet.
  - Change Chart Type to Text →Go to Show Me → Word Cloud.
  - Drag Product line → to Text (Marks card).
  - Drag Quantity → to Size and Drag Quantity → to Color
  - Edit Title: World cloud



❖ **Funnel Chart**

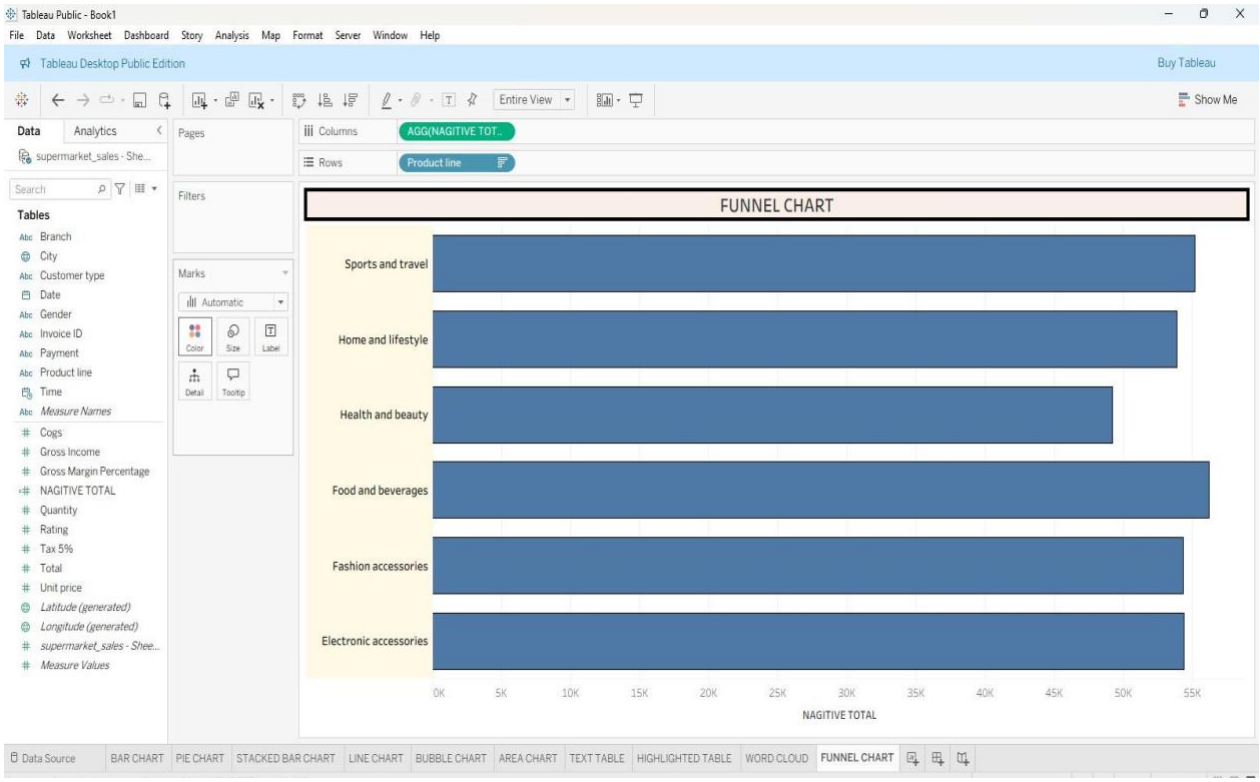
A funnel chart is a visual chart that represents stages of a process in a funnel shape, where each stage narrows down based on decreasing values.

Purpose:

The purpose of a funnel chart is to show the progression of data through different stages and identify drop-offs or conversions in a process.

Steps:

- Open Tableau → Connect to your dataset (Excel/CSV).
- Open a New Worksheet.
- Drag Product line → Rows.
- Drag SUM(Total) → Columns.
- Create a calculated field for Negative Sales and drag it to Columns to form the funnel shape.
- Change Marks to Bar
- Edit title : Funnel chart



- **Water fall chart**

  A waterfall chart is a chart that shows how an initial value increases and decreases through a series of positive and negative changes to reach a final value.

  Purpose:

  The purpose of a waterfall chart is to clearly visualize the cumulative effect of sequential additions and subtractions on a total.

  Steps:
  - Open Tableau → Connect to your dataset (Excel/CSV).
  - Open a New Worksheet.
  - Drag Product line → Columns.
  - Drag SUM(Total) → Rows.
  - Right-click SUM(Total) → Select Quick Table Calculation → Running Total.
  - Change Marks type to Gantt Bar (or use Show Me → Waterfall Chart)
  - Edit title: Water fall chart
