# Assignment -1

- **Bar Chart**

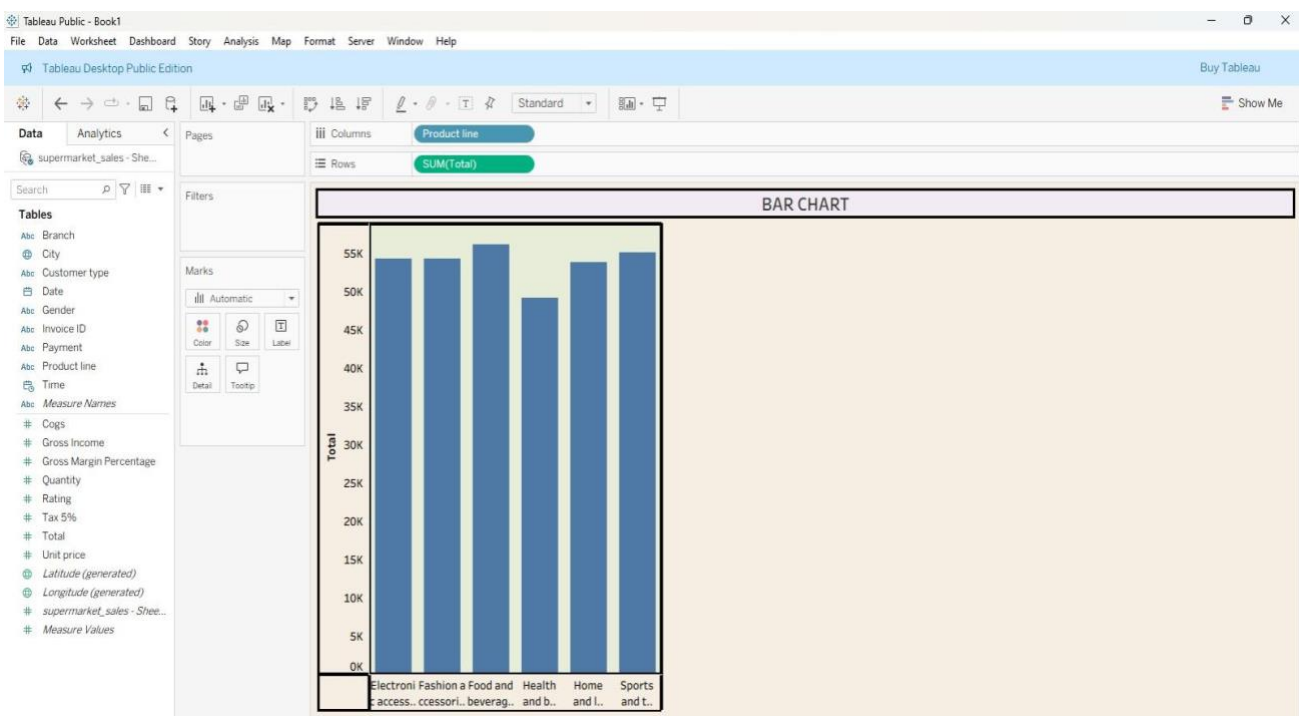
  A bar chart is a graphical representation of data that uses rectangular bars to compare different categories. The length or height of each bar shows the value of that category.

  **Purpose:**

  A bar chart compares different categories using rectangular bars, making it easy to see differences, patterns, and the highest or lowest values quickly.

  **Steps:**

  - Open Tableau & Connect Data
  - Open Tableau Public/Desktop and load your dataset (Excel/CSV).
  - Go to Worksheet →Open a new sheet.
  - Drag Product line → to Columns.
  - Drag Total (sales)→ to Rows.
  - Make sure it shows SUM(Total).
  - Set Chart Type
  - If not automatic, click Show Me → Bar Chart.
  - Edit title: Bar chart



❖ **Pie Chart**

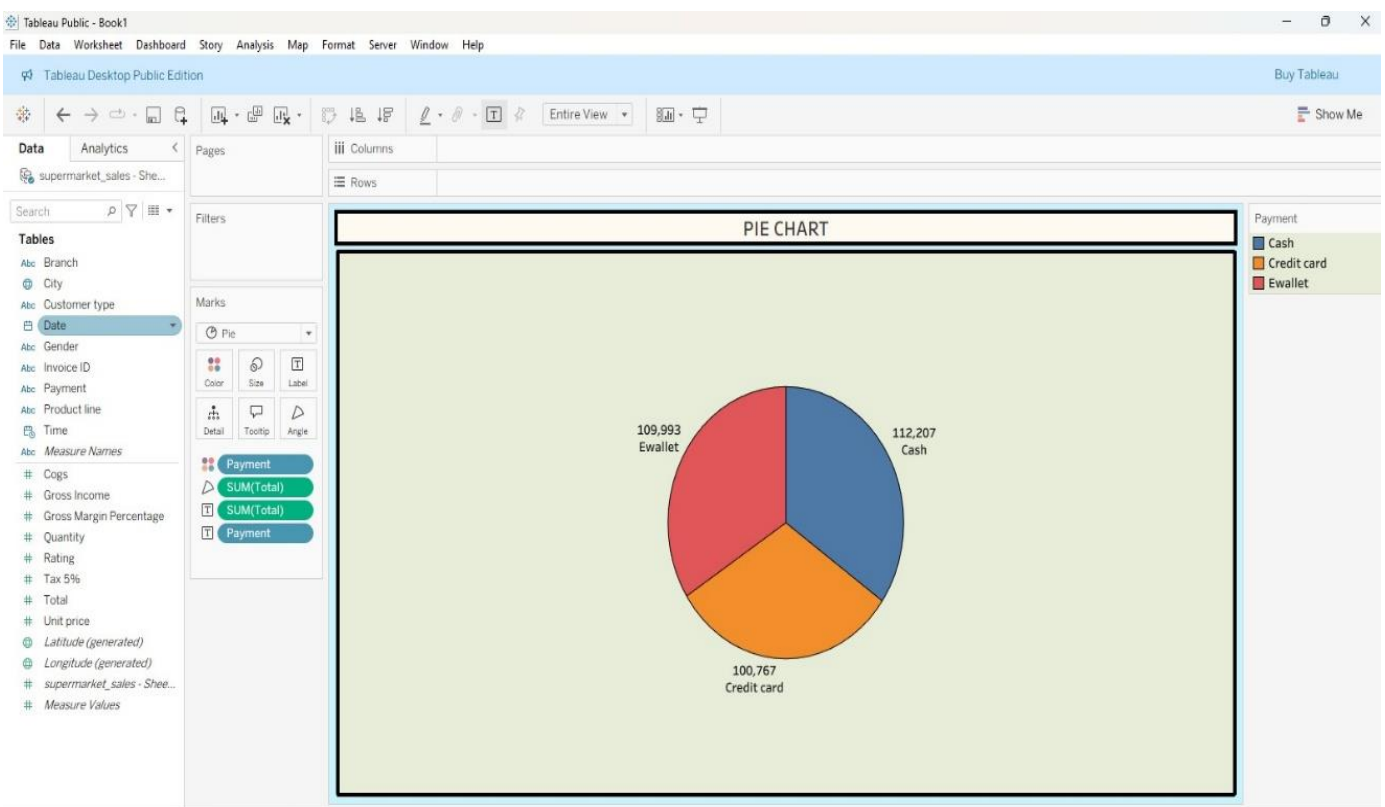
A pie chart is a circular graph divided into slices, where each slice represents a proportion or percentage of the whole.

**Purpose:**

The purpose of a pie chart is to show how different categories contribute to a total and to compare proportions visually in an easy and clear way.

**Steps:**

- Open Tableau & Connect Data
- Open Tableau Public/Desktop and load your dataset.
- Open New Worksheet→ Click on a new Sheet.
- Change Chart Type to Pie
- Go to Show Me → Pie Chart
- Drag Payment → to Color (in Marks card)
- Drag Total → to Angle
- Drag Total again → to Label
- Edit title: Pie chart



- **Stacked Bar Chart**

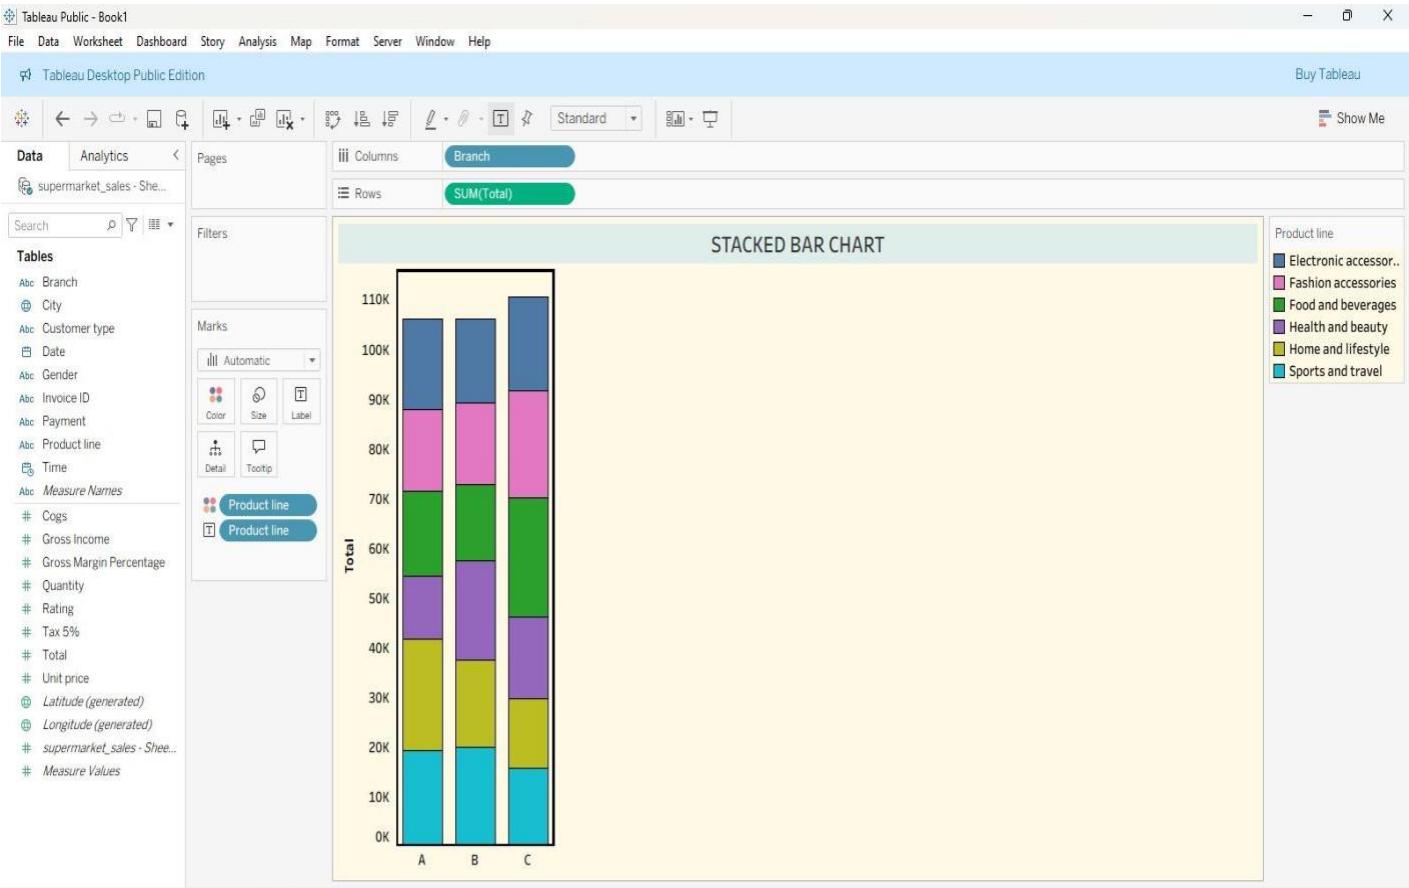
  A stacked bar chart is a type of bar chart where each bar is divided into segments to show the total value and the contribution of different subcategories within each category.

  **Purpose:**

  The purpose of a stacked bar chart is to compare total values across categories while also showing how individual parts make up each total.

  **Steps:**

  - Open Tableau and connect to your dataset.
  - Click on a new worksheet.
  - Drag Branch → to Columns ,Drag Total → to Rows (ensure it shows SUM(Total)).
  - Drag Product line → to Color in the Marks card to create stacked bars.
  - Drag Total → to Label (optional).
  - Edit title: Stacked bar chart



- **Line Chart**

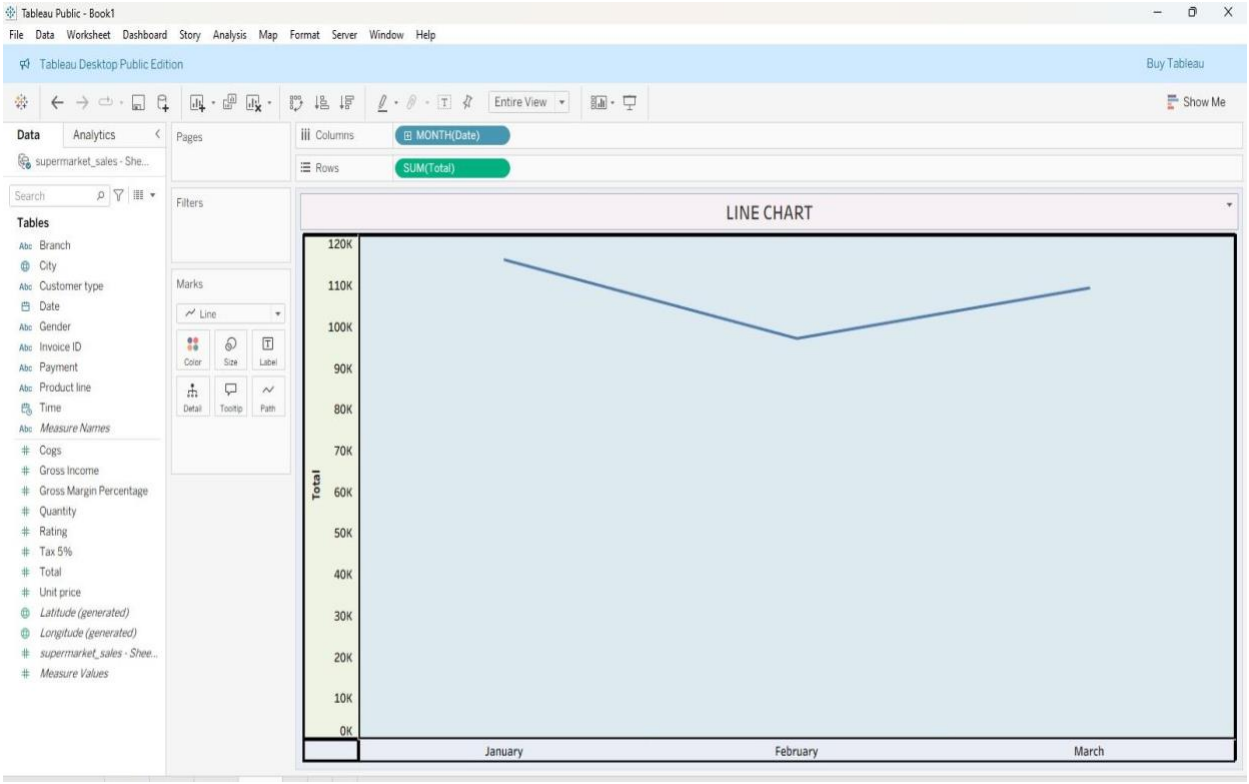
  A line chart is a graph that displays data points connected by straight lines to show changes in values over time or continuous intervals.

  **Purpose:**

  The purpose of a line chart is to show trends, patterns, and changes in data over time clearly and continuously.

  **Steps:**

  - Open Tableau & Connect Data
  - Open Tableau Public/Desktop and load your dataset.
  - Open New Worksheet →Click on a new Sheet.
  - Drag Date → to Columns.
  - Change it to MONTH(Date) if needed.
  - Drag Total → to Rows.
  - Make sure it shows SUM(Total).
  - Change Chart Type to Line Go to Show Me → Line Chart
  - Edit title: Line chart



- **Bubble Chart**

  A bubble chart is a type of scatter plot where data points are represented by circles (bubbles), and the size of each bubble represents an additional variable.

  **Purpose:**

  The purpose of a bubble chart is to compare relationships between three variables, showing patterns, trends, and the magnitude of data through bubble size.

  **Steps:**
  - Open Tableau Public/Desktop and load your dataset.
  - Open New Worksheet →Click on a new Sheet.
  - Change Chart Type to Circle (Bubble)
  - Go to Show Me → Packed Bubbles
  - Drag Product line → to Detail (in Marks card),Drag Total → to Size,Drag Total → to Color and Drag Total → to Label.
  - Edit Title:Bubble chart
