Project Design Phase-I

Problem – Solution fit

Team Id	SBAP0030975
Project Name	Visualizing housing market trends: Analysis of sales prices feature using tableau

Problem Solution fit :

The problem–solution fit ensures that the key challenges faced by real estate analysts and investors—such as handling large and complex housing datasets, identifying unclear price trends, understanding the impact of property features, and making difficult investment decisions—are effectively addressed. The solution collects housing data from reliable sources, cleans and processes it to remove inconsistencies, and transforms it into structured information. Using interactive Tableau dashboards with charts, filters, and drill-down features, the system converts raw housing data into clear, visual, and actionable insights. This enables users to easily analyze sale price trends, compare locations, evaluate feature impact, and make confident, data-driven real estate decisions.

- Simplify Complex Data – Transform large and unstructured housing datasets into organized and understandable formats.
- Identify Price Trends – Analyze historical sale prices to detect growth patterns and market fluctuations.
- Understand Feature Impact – Determine how property features like location, size, and bedrooms influence sale prices.
- Enable Interactive Analysis – Provide filters and drill-down options for detailed exploration of housing data.
- Support Smart Decisions – Help investors and analysts make accurate, data-driven real estate decisions.
- Improve Data Accuracy – Ensures cleaned and validated housing data to reduce errors in analysis and reporting.
- Save Time in Analysis – Automates calculations and visualization, reducing manual effort and speeding up decision-making.
- Enhance Market Comparison – Enables easy comparison of prices across different locations, property types, and time periods.
- Detect Hidden Patterns – Uses visual analytics to uncover correlations and trends that may not be visible in raw data.
- Increase Investment Confidence – Provides clear insights and forecasting support, helping investors make low-risk and high-return decisions.

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

Project Title: | **Project Design Phase I - Solution Fit Template** | **Team ID: SBAP0030975**

Define CS, fit into CC

1. CUSTOMER SEGMENTS — CC

Define the target customer segments interested in housing market trends. E.g. real estate agents, home buyers, investors, policymakers, etc.

6. CUSTOMER CONSTRAINTS — EC

Identify any key constraints fata vall by the customer segments in analying housing market data.
E.g. limited time, technical skills, access to specific la

8. AVAILABLE SOLUTIONS — CC

Identifiy tngrthings onaries tiageares that aetoae awing ther and ohoorbe and ohrow and bennate. Bloating Zillow, public housing market reports, e.g. Excel, Zillow.

Explore AS, differentiate

Focus on J&P, tap into BE, emotions

2. JOBS TO BE DONE / PROBLEMS — BC

Describe the key jobs to be done or problems your project aims to solve.
E.g. understanding housing market trends, spotting price patterns, comparing features of sold houses

5. PROBLEM ROOT CAUSE — BC

Identify the root cause of the prolems described in Section 2.
E.g. stattherd and hard-to-interpret data on housing market trends.

5. PROBLEM ROOT CAUSE — BC

List existing tools that a cmstomer adescthery tatles the utable ctation ake.
E.g. Excel, Zillow, public housing market reports.

Focus on J&P, tap into BE, emotions

Identify strong TR & EM

3. TRIGGERS — TO

Examine what triegers arise for each segment arourd the problem when it come to analying housing market trends, e.g. chowing tap.
E.g. checking housing prices regularly, uve-tranding for-buying/selling

10. YOUR SOLUTION — TC

Identifiy thay cntarnet customer segments use uritial housing market data, and how behwovc might change, using Tableas as analive.

7. BEHAVIOUR — AB

Identify acclons customers currently take-ang pesenber new behauves thar using Tableau for analyse- sechnoods
E.g. manually, compmendeiaors, intecactive duustonnces in Tableau, ooho lords

4. TRIGGERS — TS

Examine what trigigers arise for each segment around the problem when it cometo analyzing housing market trends.
E.g. checking housing prices regularly, iecpoting to buprojectting/betnaro

4. EMOTIONS: BEFORE / AFTER — TB

Highlight emotional change before and after using Tableau to anleyde housing data e.g2.
E.g. before: frnustations/comanions; bifonic clarityconifrence in understanalning trends

7. CHANNELS & BEHAVIOUR — TO

Identify thar tcmsumer sntcored sepments use to tlear browing cronow data and ollata.
E.g. real estalec tlaits segmoate afcrm-rne-uaigw halelesal pilooaiolg to. Tableau, dechb sards

Identify strong TR & EM

3. TRIGGERS — TI

Examine what triggers arise for each segment arourd the problem when it come to analyzing housing market trends.
E.g. checking housing prices regularly, preparing tor buying/selling

4. EMOTIOFS: BEFORE / AFTER — TS

Highlight thon customers tmo ourt bo Jock and there using bebincoers cstruettes ihe amaly data
E.g. before: frnustatifiom-cmotiiiins asun clarity sor-essio-mashinge. Tableau, dectlb-oards

7. CHANNELS & BEHAVIOUR — TO

Identify aclons customers data and halid and potential new tableauest thorn using verithers for beypers.
E.g. recl estate ateeastianalec cin-orojyberteers Tableau.

9. CHANNELS & BEHAVIOUR — TO

Identify therm customers setpauiens use horled housing tranket tremen, before or tnal bensphtica
E.g. recl estate comostes, btore maning tnoevc haloleaal browelng ro. Tableau, dectlb-bards

Focus on J&P, tap into BE, emotions

Identify strong TR & EM

3. EMOTIOFS: BEFORE / AFTER — TS

Highlight emtnonal change before and after using Tableau to analyse housing data.
E.g. before tonstnoasfsianalinzlore-after clarity/ccon-fcencs in understanding trends.

7. CHANNELS & BEHAVIOUR — TO

Identify aclons customers data and halid and potential new tableauest thorn using verithers for beypers.
E.g. recl estate ateeastianalec cin-orojyberteers Tableau.

9. BEHAVIOUR — TO

Identify aclons customers currertly take and potential non bepewer cronus that Tableau.
E.g. manually compiling data vs interactive desh-bonds in Tableau
